

Will Mizer

(941) 812-7787 | will.mizer@gmail.com | linkedin.com/in/will-mizer | willmizer.github.io/wills_portfolio

Technical Skills

Languages & DBs: Python, R, SQL (PostgreSQL, MySQL, SQL Server), HTML/CSS/JavaScript
Machine Learning: scikit-learn, PyCaret, XGBoost, LightGBM, Random Forest, Transformers, PySpark, NLP
Data Analysis: pandas, NumPy, SciPy, Excel (Pivot Tables, VLOOKUP)
Visualization: Tableau, Power BI, Matplotlib, Seaborn
Cloud & Tools: AWS (EC2, S3), GCP, Docker, Git, Flask, REST APIs, Microsoft 365, LaTeX, Bash

Education

Bachelor of Science in Data Science <i>Florida Polytechnic University</i> GPA: 3.92	Aug 2024 – May 2027 Lakeland, FL
Associate of Science in Computer Programming and Analysis <i>State College of Florida</i> GPA: 3.65	Aug 2021 – Dec 2023 Bradenton, FL

Experience

Data Analyst Intern <i>One Alliance North America Insurance</i> - Designed an end-to-end policy churn prediction framework from data research and ETL through feature engineering, model selection, tuning, and deployment. - Developed baseline models using PyCaret and validated performance through walk-forward backtesting across rolling time horizons. - Partnered with business departments to resolve domain edge cases and established a foundational model identifying \$500,000 in at-risk annual recurring revenue. - Authored production-grade technical documentation in LaTeX detailing pipeline mechanics, business context, and scaling roadmaps.	Jun 2026 – Aug 2026 Sarasota, FL
Undergraduate Researcher <i>Florida Polytechnic University</i> - Researched discrimination in LLM resume classification, testing how pronoun, gender, and racial identity signals change model outcomes on otherwise identical resumes. - Built a scalable data ingestion pipeline to feed large volumes of resume data through 5 different LLMs and automatically collect their responses for comparison. - Compared outputs across models to identify which LLMs showed the strongest demographic bias in their classifications and recommendations. - Led post-collection analysis and prepared findings for academic publication.	Jan 2026 – Present Lakeland, FL
AI Data Analyst <i>TELUS International</i> - Performed detailed quality assurance and data validation across large-scale datasets to improve data quality for LLM training pipelines. - Evaluated, annotated, and audited complex model responses to generate reliable datasets, enhancing safety alignment and output quality.	Nov 2023 – Apr 2024 Remote

Projects

Insurance Churn Risk Dashboard | *Python, XGBoost, SHAP, Flask, AWS*

- Deployed a multi-model ensemble (XGBoost, LightGBM, Random Forest) achieving 0.80 recall, using SHAP to generate targeted retention strategies.
- Built a customer at-risk dashboard on AWS EC2 to simulate revenue loss across custom portfolio scenarios.

College Happiness Simulator Platform | *Python, Random Forest, Flask, AWS*

- Scraped and merged National Center for Education Statistics and review data for 3,200+ U.S. universities; built a Random Forest model to identify satisfaction drivers.
- Created a simulator estimating satisfaction gains from campus budget allocation decisions.

Virginia Housing Analysis | *Python, Random Forest, SQL*

- Cut home price prediction error $\pm \$180 \rightarrow \pm \37 price-per-sqft, a 79% reduction using tuned ensemble models.
- Identified acreage and regional risk as top valuation drivers through feature importance analysis.
