

Will Mizer

(941) 812-7787 | will.mizer@gmail.com | linkedin.com/in/will-mizer | willmizer.github.io/wills_portfolio

TECHNICAL SKILLS

Languages & DBs: Python, R, SQL (PostgreSQL, MySQL, SQL Server), HTML/CSS/JavaScript, Bash

Machine Learning: scikit-learn, PyCaret, XGBoost, Random Forest, Transformers, PySpark, NLP

Data Analysis: pandas, NumPy, SciPy, Excel (Pivot Tables, VLOOKUP)

Visualization: Tableau, Power BI, Matplotlib, Seaborn

Cloud & Tools: AWS (EC2, S3), GCP, Docker, Git, Flask, REST APIs, Office365, LaTeX

EDUCATION

Florida Polytechnic University

Bachelor of Science in Data Science

- GPA: 3.92

Lakeland, FL

Aug 2024 – May 2027

State College of Florida

Associate of Science in Computer Programming and Analysis

- GPA: 3.65

Bradenton, FL

Aug 2021 – Dec 2023

EXPERIENCE

One Alliance North America

Data Analyst Intern

Jun 2026 – Present

Sarasota, FL

- Architected an end-to-end policy churn prediction framework from data research and ETL through feature engineering, model selection, and deployment.
- baseline models via **PyCaret** and validated performance using walk-forward backtesting across rolling time horizons.
- Partnered cross-functionally with business teams to resolve domain edge cases and established a baseline model preserving **\$500,000 in annual recurring revenue**.
- Authored production-grade technical documentation in **LaTeX** detailing pipeline mechanics, business context, and scaling roadmaps.

Florida Polytechnic University

Orientation Leader & Campus Recreation

May 2025 – Present

Lakeland, FL

- Facilitated onboarding and team-building initiatives for 100+ incoming students, honing conflict resolution, active listening, and public speaking under pressure.
- Collaborated with university administration to streamline campus logistics, adapting engagement strategies in real time to serve diverse student needs.

TELUS International

AI Data Analyst

Nov 2023 – Apr 2024

Remote

- Executed rigorous **Quality Assurance** and data validation across large-scale datasets to optimize data integrity for Large Language Model training pipelines.
- Evaluated, annotated, and audited complex model responses to generate reliable ground-truth datasets, enhancing safety alignment and output quality.

PROJECTS

Interactive Churn Risk & VaR Simulation Platform | Python, XGBoost, SHAP, Flask, AWS

- Architected a full-stack web application deploying a **dual-model ensemble** (XGBoost, LightGBM, Random Forest) with a 0.80 recall threshold for proactive account monitoring.
- Leveraged **SHAP explainability** to deliver automated, "Next Best Action" retention strategies for user-driven risk scenario analysis.
- Built an interactive **Value-at-Risk (VaR)** financial dashboard on AWS EC2 (Nginx/Gunicorn) to model simulated revenue loss across custom portfolio parameters.

College Happiness Simulator Platform | Python, Random Forest, Flask, AWS

- Engineered a dataset of **3,200+ U.S. universities** via ETL from student reviews and NCES data using Selenium and BeautifulSoup; developed a Random Forest model ($R^2 = 0.74$) to quantify satisfaction drivers.
- Built a simulation platform to model marginal gains from budget allocation, enabling data-driven decision-making for university administrators regarding campus facility investments.

Virginia Housing Analysis | Python, XGBoost, Random Forest, SQL

- Reduced **home price prediction error by 50%** (MAE reduction of \$70K) by implementing ensemble methods and hyperparameter tuning to support strategic builder investment decisions.
- Constructed a predictive pricing tool incorporating feature importance analysis, identifying acreage and regional risk factors as primary drivers of valuation.
