Technical Skills

Business Intelligence: Power BI, Tableau, Excel (Pivot Tables, VLOOKUP), Microsoft 365
SQL and Databases: SQL, PostgreSQL, MySQL, SQL Server
Data Analysis: Python, R, pandas, NumPy, SciPy, data cleaning, ETL, data validation
Visualization: Plotly, Matplotlib, Seaborn
Additional Tools: Git, REST APIs, Flask, AWS (EC2, S3), scikit-learn, PySpark

Education

Bachelor of Science in Data Science Expected May 2027
Florida Polytechnic University — Lakeland, FL
GPA: 3.85

Associate of Science in Computer Programming and Analysis Dec 2023
State College of Florida — Venice, FL
GPA: 3.64

Experience

Undergraduate Researcher Jan 2026 – Present
Florida Polytechnic University — Lakeland, FL

- Built an automated data ingestion and response collection pipeline to compare resume evaluations across five LLMs.
- Analyzed how pronoun, gender, and racial identity signals affected outcomes on otherwise identical resumes.
- Led post-collection analysis and prepared findings for academic publication.

Data Analyst Intern Jun 2026 – Aug 2026
One Alliance North America Insurance — Sarasota, FL

- Developed a policy churn prediction framework spanning data research, ETL, feature engineering, model evaluation, and deployment.
- Partnered with business departments to resolve domain edge cases; built a foundational model identifying $500,000 in at-risk annual recurring revenue.
- Evaluated model performance through walk-forward backtesting across rolling time horizons.
- Documented pipeline mechanics, business context, and scaling plans to support future development.

AI Data Analyst Nov 2023 – Apr 2024
TELUS International — Remote

- Performed quality assurance and data validation across large-scale datasets supporting large language model training pipelines.
- Evaluated, annotated, and audited model responses to support reliable training data, safety alignment, and output quality.

Projects

Elections & Census Dashboard | Python, Plotly, Census API

- Retrieved Census demographics for 26,782 U.S. cities and joined them with 2000–2024 presidential election results into a unified analytics dataset.
- Visualized income, demographics, and population; built a city-ranking tool scoring locations against user-specified lifestyle criteria.

College Happiness Simulator Platform | Python, Random Forest, Flask, AWS

- Scraped and merged NCES and review data for 3,200+ U.S. universities to analyze student satisfaction drivers.
- Built a simulator estimating satisfaction changes associated with campus budget allocation decisions.

Virginia Housing Analysis | Python, SQL, Random Forest

- Reduced reported price-per-square-foot prediction error from $180 to $37, a 79% reduction, using tuned ensemble models.
- Used feature importance analysis to identify acreage and regional risk as leading valuation drivers.
